

# JOb Hunting

Presented by  
Biraj Chhetri

# Introduction

- It is a web application for finding the job online. This web application filters the suitable job from the pool of data and finds you the suitable job
- Admin can create job post according to the job types

# Objective

- The main purpose of this web application is to find the suitable job.
- It will give a companies a platform to perform a job postings and recruitment process
- It will helps companies to manage the job posting

# Methodology

- For our project we have followed waterfall model.
- The waterfall model is linear, sequential approach to the software development life cycle.
- In the Software development life Cycle (SDLC) that is popular in software engineering and product development.
- It gives the comfort to change the design or system requirement.
- Waterfall model is best for small projects

# Design
